Mae rheoli poen cleifion sydd wedi torri gwddf asgwrn y forddwyd cyn gynted â phosibl ar ôl ei dorri o'r pwys mwyaf i broses wella'r claf. Mae hyn yn lleddfu ar ddiodeffaint y claf ac ar yr effeithiau niweidiol y gall poen heb ei rheoli eu hachosi. Mae'r bwndel gofal yn cynnwys mesur sgoriau poen cychwynnol a dilynol a roddir ar lafar, a rhoi meddyginiaethau poen priodol cyn cyrraedd yr ysbyty. Cleifion yr amheuir bod ganddynt ddiagnosis o sepsis neu o sioc septig, ac y cofnodwyd sgôr NEWS ar eu cyfer. Mae hyn yn ei gwneud yn haws canfod achosion posibl sepsis yn gynt, ac mae hefyd yn hwyluso'r broses o drosglwyddo cleifion yn yr ysbyty.
26	AQ16vi	Nifer a chanran y cleifion yr amheuir eu bod wedi cael ffit wres sy'n 5 oed neu'n iau, ac y cofnodwyd eu bod wedi derbyn y bwndel gofal priodol. 30	AQ19i	Canran y cleifion a gludwyd i'r ysbyty yn dilyn asesiad wyneb yn wyneb.	Pa ganran o gleifion sy'n cael eu cludo i'r ysbyty yn sgil galwadau 999?
31	AQ19ii	Nifer y cleifion sy'n cael eu cludo i'r ysbyty yn ôl math	I ble mae Ymddiriedolaeth GIG Gwasanaethau Ambiwylans Cymru yn cludo cleifion? Pa gyfleoedd sydd i gludo cleifion i fannau eraill?

32	AQI20i	Nifer a chanran yr hysbysiadau ynghylch trosglwyddo cleifion o fewn 15 munud ar ôl cyrraedd yr ysbyty	Mae'r DAA hwn yn mesur perfformiad wrth drosglwyddo cleifion o'r ambiwlans i'r ysbyty.

36	AQI22ii	Nifer a chanran yr achosion lle llwyddwyd i glirio o fewn 15 munud o drosglwyddo gofal y claf i staff yr ysbyty, yn ôl math o ysbyty.	Mae'r DAA hwn yn ystyried perfformiad wrth drosglwyddo a chlirio yn ôl safle. Mae hyn yn ei gwneud yn bosibl nodi a lledaenu arfer da.

## Model ymateb clinigol

Math o alwad	Diffiniad y Pwyllgor Gwasanaethau Ambiwllans Brys	Enghraifft	Dangosydd ansawdd
COCH	Galwadau lle mae bywyd yn y fantol, fel ataliad y galon neu dagu. Bydd y galwadau hyn yn destun dangosyddion clinigol fel cyfraddau cylchrediad dychweliad digymell cylchrediad (ROSC) yn ogystal â safon seiliedig ar amser. Mae hyn yn ei gwneud yn ofynnol i 65% o leiaf o'r galwadau hyn arwain at bresenoldeb ambiwlans o fewn 8 munud.	Problemau anadlu / Ataliad y galon	Ymateb o fewn 8 munud mewn o leiaf 65% o'r achosion Targed cenedlaethol
MELYN	Galwadau difrifol ond lle nad yw bywyd yn y fantol. Bydd y galwadau hyn yn cynnwys y rhan fwyaf o achosion meddygol a thrawma, fel poen yn y frest a thoresgyrn. Bydd galwadau melyn yn cael ymateb brys. Crëwyd proffil ymateb i sicrhau bod yr adnodd clinigol mwyaf addas yn cael ei anfon i bob galwad categori melyn. Bydd hyn yn cynnwys triniaeth drwy wasanaethau "gwrando a thrin" dros y ffôn. Defnyddir profiad cleifion a data dangosyddion clinigol i werthuso effeithiolrwydd ymateb ambiwlansys i alwadau melyn.	Poenau cardiaidd yn y frest / Strôc	Cydymffurfio â phhecynnau gofal ar gyfer cleifion cardiaidd, cleifion strôc a chleifion sydd wedi torri gwddf asgwrn y forddwyd.
GWYRDD	Nid yw galwadau 999 sy'n cael eu categoreiddio'n rhai gwyrdd yn ddifrifol nac yn alwadau lle mae bywyd yn y fantol. Mae cyflyrau fel clust dost neu fân anafiadau'n cael eu codio'n alwadau gwyrdd. Y driniaeth ddelfrydol ar gyfer galwadau gwyrdd yw gwasanaeth brysbennu eilaidd dros y ffôn.  Yn aml, bydd gweithwyr gofal iechyd proffesiynol, fel meddygon, bydrwagedd neu ysbytai cymunedol, angen trosglwyddo claf ar frys o ofal aciwtedd isel i gyfleuster aciwtedd uwch. Mae'r trosglwyddiadau hyn yn cael eu nodi fel galwadau gwyrdd ac yn cael eu cyflawni o fewn amserlen y cytunwyd arni gyda'r gweithwyr gofal iechyd proffesiynol sy'n gofyn am y trosglwyddiad.	Llewygu – wedi gwella ac yn effro	Canlyniadau clinigol a boddhad cleifion ar gyfer 999. Cydymffurfio ag amserlenni cytunedig o ran derbyniadau sy'n ymwneud â galwadau gan weithwyr gofal iechyd proffesiynol.

18	AQ13	Number of GREEN coded calls including median, 65th and 95th percentile	How many 999 calls received are coded as a GREEN verified incident resulting in a response?
19	AQ14	Number of responded Incidents where at least 1 resource arrived at scene	How effective is the Welsh Ambulance Services NHS Trust at sending the right resource first time to an incident.
20	AQ15	Number of Community First Responders attendances at scene, including by call category and percentage	How often is a Community First Responder sent to a 999 call?
21	AQ16i	Number and percentage of patients with attempted resuscitation following cardiac arrest, documented as having a return of spontaneous circulation (ROSC) at hospital door	Outcome from out-of-hospital cardiac arrest with attempted resuscitation, measured by documented return of spontaneous circulation (ROSC) at time of arrival of the patient to hospital. Recording of ROSC at hospital is the international Utstein standard and indicates the outcome of the pre-hospital response and intervention.
22	AQ16ii	Number and percentage of suspected stroke patients who are documented as receiving appropriate stroke care bundle	Patients with suspected stroke (including unresolved transient ischaemic attack) who are documented as receiving the appropriate care bundle. The stroke care bundle comprises measurement of blood pressure, consciousness level, blood glucose and FAST test.
23	AQ16iii	Number and percentage of older patients with suspected hip fracture who are documented as receiving analgesia and appropriate care bundle	Fractured hips (known as neck of femur injuries): fractured hips cause significant pain which can be exacerbated by movement. Pain control for patients with a fractured neck of femur in the immediate post-trauma period is paramount to promoting recovery and patient experience. This reduces suffering and the detrimental effects uncontrolled pain may have. The care bundle measures the recording of initial and subsequent verbal pain scores and administration of appropriate pain medicines before arrival at hospital, also included is the total number of patients with a suspected fractured hip who received analgesia.
24	AQ16iv	Number and percentage of ST segment elevation myocardial infarction (STEMI) patients who are documented as receiving appropriate STEMI care bundle	Patients with STEMI diagnosis (ST-elevation myocardial infarction) who are documented as receiving the appropriate care bundle. The STEMI care bundle comprises of four elements including pain assessment and administration of three medicines including analgesia.
25	AQ16v	Number and percentage of suspected sepsis patients who have had a documented NEWS score.	Patients with a suspected diagnosis of sepsis or septic shock who have a documented NEWS score. This promotes early recognition of suspected sepsis and enhances handover in hospital.
26	AQ16vi	Number and percentage of patients with a suspected febrile convulsion aged 5 years and under who are documented as receiving the appropriate care bundle.	Patients aged 5 years and under with suspected febrile convulsion who are documented as receiving the appropriate care bundle. The febrile convulsion care bundle comprises measurement of heart rate, respiratory rate, oxygen saturation, temperature and blood glucose.
27	AQ16vii	Number and percentage of hypoglycaemic patients who are documented as receiving the appropriate care bundle.	Patients with low blood sugar (hypoglycaemia) who are documented as receiving the appropriate care bundle, which comprises blood glucose measurement before treatment, treatment and blood glucose measurement after treatment.
28	AQ17	Number of incidents that resulted in a non conveyance to hospital	How effective are the Welsh Ambulance Services NHS Trust in closing incidents at scene?
29	AQ18	Number and percentage of incidents where a resource was the ideal response as per the clinical response model	How often are Welsh Ambulance Services NHS Trust sending the ideal resource to scene?
30	AQ19i	Percentage of patients conveyed to hospital following a face to face assessment.	What percentage of patients from 999 calls are conveyed to hospital.
31	AQ19ii	Number of patients conveyed to hospital by type	Where do Welsh Ambulance Services NHS Trust convey patients? What are opportunities to convey elsewhere?

32	AQI20i	Number and percentage of notification to handover within 15 minutes of arrival at hospital	This AQI measures handover performance at hospital.
33	AQI20ii	Number and percentage of notification to handover within 15 minutes of arrival at hospital by hospital type.	This AQI looks at handover performance by site. This allows good practice to be identified and spread.
34	AQI21	Number of lost hours following notification to handover over 15 minutes	This AQI measures the amount of lost hours following notification to handover over 15 minutes.
35	AQI22i	Number and percentage of handover to clear within 15 minutes of transfer of patient care to hospital staff	This AQI measures the number of times where a WAST crew are available again within 15 minutes of handing over their patient.
36	AQI22ii	Number and percentage of handover to clear within 15 minutes of transfer of patient care to hospital staff by hospital type	This AQI looks at handover to clear performance by site. This allows good practice to be identified and spread.
37	AQI23	Conveyance to other LHB locations	This AQI records the number of occasions where a patient is taken to a destination in a different Health Board area than the location of the call.
38	AQI24	Number of lost hours following handover to clear over 15 minutes	This AQI shows the amount of time lost where ambulance crews are not available within 15 minutes of handing over their patient.

## Clinical Response Model

Call Type	EASC Definition	Example	Quality Indicator
RED	Immediately life threatening calls such as cardiac arrest or choking. These calls will be subject to both clinical indicators such as Return of Spontaneous Circulation (ROSC) rates and a time based standard requiring a minimum attendance at 65% of these calls within 8 minutes.	Respiratory / cardiac arrest	8 minute response time within 65%. National target
AMBER	Serious but not immediately life threatening. These calls will include most medical and trauma cases such as chest pain and fractures. Amber calls will receive an emergency response. A response profile has been created to ensure that the most suitable clinical resource is dispatched to each amber call. This will include management via "hear & treat" services over the telephone. Patient experience and clinical indicator data will be used to evaluate the effectiveness of the ambulance response to amber calls.	Cardiac chest pains / stroke	Compliance with care bundles for cardiac stroke and fractured neck of femur patients.
GREEN	999 calls received and categorised as green are neither serious or life threatening. Conditions such as ear ache or minor injuries are coded as green calls. Green calls are ideally suited to management via secondary telephone triage.  Health Care Professionals (HCP) such as doctors, midwives or community hospitals often require an urgent transfer of a patient from low acuity care to a higher acuity facility. These transfers are coded as green calls and undertaken within a timeframe agreed with the requesting HCP.	Fainting - recovered and alert	Clinical outcomes and patient satisfaction for 999. Compliance with healthcare professional agreed admission timescales for HCP calls.
